Dear Friends,

Welcome to our 18th Annual BJ Angus Genetics Spring Production Sale. As we complete our 25th year of producing Angus genetics for commercial and registered breeders, we would like to thank our many customers for their decades of loyal business.

We have learned a great deal about breeding cattle in the past 25 years but the most important lesson is to help people, take care of people, and love people. We want to raise the best Angus cattle possible. Yet, we realize that isn't good enough. We want our customers to enjoy the success that designed genetics offers them, and yes, to achieve a profit, but to use this profit to make their families, country and world a better place.

Our bull offering this year consists of over 72 heifer bulls and many sets of full brothers. We have used many tools (pedigrees, EPDs, AHIR data, DNA, phenotypic data, & cow family history) to offer you "honest cattle" for your consideration. What the numbers can't show you is our constant dedication to selecting for good feet and legs, quiet disposition, awesome phenotype, and fertility. These extremely gentle bulls have been running on Flint Hills pastures since October 10, 2018 and have excellent feet, legs and overall structure to ensure longevity.

The female offering is young, productive, phenotypically awesome, and bred to produce progeny that will hit all the targets from birth to the dinner plate efficiently. The donor cows offer time-tested performance and top of the breed rankings, the bred heifers are broody and offer breed leading EPDs and the pairs and bred cows have been highly productive and offer excellent EPDs and performance records. Many of the spring calving cows selling served as embryo donors for us last year. **We are selling all our spring calving cows in this event and several have ET calves at side or will calve soon after the sale.** Please note in the catalog, pairs and bred cows with ET calves are presented in their respective cow families where the donor dam of the calf is selling.

We are truly thankful to our many clients that have, not only purchased our cattle, but have become a greater part of our family. We promise to keep our intensity about the business and to immerse ourselves in what makes our customers money. We continue to promise if you have a problem, we will take care of it. We really appreciate our relationships with all of you.

Please join us March 14. If you are unable to attend, please feel free to go to www.LiveAuctions.tv and bid online. The online process works well for folks who can't attend the sale. Videos of all cattle selling will be posted on our website by March 1, www.bjangus.com.

Thank you for your interest in BJ Angus Genetics. Please let us know how we can assist you.

John & Bonnie Slocombe

SCHEDULE OF EVENTS

Wednesday, March 13:

12 Noon: Cattle available for viewing

Thursday, March 14:

- 8:00 AM: Rolls & Coffee | Cattle available for viewing
- 11:00 AM: Complimentary lunch
- 12:30 PM: Sale begins! **Cattle sell in sale book order**

Real-time bidding is available via the internet for this sale. Live audio and video will allow buyers to bid on animals just as if they were present at the sale. Buyers must create an account two days prior to the sale. Please visit www.LiveAuctions.tv to create an account and request a buyer number. Instructions are available on the website to walk you through the account set-up process. Contact Brad Fahrmeier (816) 392-9241 • email: brad@liveauctions.tv.

ADDITIONAL SALE INFORMATION:

LIABILITY: All persons attending the sale do so at their own risk. The owners, hosts, and sales staff assume no liability, legal or otherwise, for injury, loss or damages.

OUTSTANDING BREEDING GUARANTEE: Our comprehensive breeding guarantee assures buyers that all breeding cattle sold are fertile to the best of our knowledge. (See page 9).

HERD HEALTH: All cattle will be accompanied by proper health certificates for immediate shipment. Further information is provided on Page 2.

INSPECTION OF CATTLE: The cattle will be available for inspection at any time prior to the sale at BJ Angus Genetics. Please call ahead.

TERMS AND CONDITIONS: Cattle will sell under the suggested Terms & Conditions of the American Angus Association (www.angus.org/Pub/suggested_sale_terms.pdf). Purchaser assumes the risk of death or injury to their livestock immediately after the animal is sold. Insurance is available to insure the animal until delivery to the buyer's ranch, at the buyer's cost.

SIGHT UNSEEN PURCHASES: If you can't make it to the sale we will do our best to represent the cattle to you. Please call at least 72 hrs. ahead of the sale, if possible, to go over

your needs. This gives us time to determine the best possible bulls/females for your operation and get back with you to discuss them. You may leave bids with us if desired, we will buy the cattle as cheap as we can, or you may call any representative you desire. Our program is built on trust and honesty.

SUPPLEMENTAL INFORMATION: A supplement sheet will be available sale day with complete and up-to-date breeding and ultrasound information. This information will also be posted on our website, www.bj Angus.com. Announcements from the auction block regarding the cattle selling take precedence over the information listed in this sale book or the sale supplement.

SETTLEMENT: Cattle purchases are to be settled on sale day prior to load out. Terms of the sale are cash or check, unless satisfactory arrangements are made prior to sale day.

SALE LOCATION: See map on back cover

DELIVERY: All bulls will be delivered free of charge in Kansas and surrounding states. If you pick up your cattle purchases on sale day, we will deduct \$50 from the purchase price of each lot or group. We will be glad to help make delivery arrangements for your female purchases.

Go to www.bj Angus.com to view photos, videos, and updated information of the sale offering!

How To Read & Use The Data

An Expected Progeny Difference (EPD) is a prediction of how future progeny of a sire or dam are expected to perform in various production scenarios, and carcass traits which are measurable. EPDs are expressed in actual pounds, square inches, or centimeters (depending on the trait), plus or minus what you can expect in the weights or measurements of progeny sired by a particular animal as compared with another animal. The EPDs of the animals listed in the sale book can be compared to other animals of the same breed.

The CAB® icon will appear on the pedigree of those bulls that meet the criteria for targeting the Certified Angus Beef® Brand. (see inside back cover for details)

Angus Non-Parent Bulls Average EPDs and Indexes

CED	BW	WW	YW	SC	Milk	CW	MARB	RE	\$W	\$G	\$B
+7	+1.4	+52	+93	+.74	+24	+38	+.51	+.51	+47.62	+34.45	+120.17

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW) predicts the difference in average birth weight of a bull's calves compared to calves of another bull. Reported in pounds.

* Experience has shown that an Angus bull with a CED EPD of +6 or higher and a BW EPD of +2.0 or less can be used on first-calf heifers with a minimal number of calving problems. If you do not have heifers to breed and just need a bull for cows that have calved before, most Angus bulls are acceptable for use on mature cows from a birth weight standpoint.

Weaning Weight EPD (WW) is a prediction of a bull's ability to transmit weaning growth to his progeny. For example, Bull A has a Weaning Weight EPD of +60 pounds and Bull B has a Weaning Weight EPD of +40 pounds. At weaning, Bull A's calves will average 20 pounds heavier. A higher number is desirable.

Yearling Weight EPD (YW) takes into account both pre-weaning and post weaning growth. Yearling weight is the most heritable of all growth traits. You can expect bulls with high yearling EPDs to produce fast gaining calves. If Bull A has a Yearling EPD of +90 and Bull B has a Yearling EPD of +60, Bull A's calves will average 30 pounds heavier than Bull B's at one year of age.

Scrotal Circumference EPD (SC) expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Milk EPD expressed in pounds of weaning weight that result from the amount of milk produced by daughters of a particular bull, as compared to the daughters of other bulls. If Bull A is +25 for Milk and Bull B is +15, Bull A's daughters' calves will weigh 10 pounds heavier at weaning due to her superior milking ability.

CARCASS EPDS

Carcass Weight EPD (CW) expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb) predicts the difference in average USDA marbling score of a bull's progeny compared to progeny of another bull at a similar end point. The higher the value, the higher the amount of intramuscular fat (tasty fat) in the ribeye, which positively affects quality grade.

Ribeye Area EPD (RE) expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

PERFORMANCE INFORMATION

Adj 205: Weaning weights adjusted to 205 days of age and for age of dam.

Adj. 365: Weight, scrotal circumference adjusted to 365 days of age.

%IMF: The amount of desirable fat or marbling in the ribeye muscle adjusted to 365 days of age.

Adj. Ribeye: Measured in square inches and adjusted to 365 days of age. Most heritable of all traits.

PERCENTILE RANKINGS for EPDs and \$Indexes allow you to see how the cattle in the sale offering stack up to any Angus bull/female within their respective breed, NOT just those in our sale group.

Angus Indexes: \$W & \$B

Which one do I use?

Let's keep it simple... Both indexes are multi-trait indexes, combining many traits of economic importance. BOTH are important indexes as all cattle are eventually harvested so the carcass components should not be ignored even if you do sell your calf crop at weaning time. Someone down the road will feed and harvest those cattle and they will be more likely to return to you to buy your calves if the next link in the chain is profitable, too.

\$W should be more important to you than \$B if you sell your calves at weaning and retain replacement heifers, or background cattle.

\$B will have more importance for you if you feed out your calves and retain ownership.

\$W: Weaned Calf Value

Ask an experienced cow-calf producer to identify the characteristics of a profitable beef cow and you will probably get a response like this: reproductively sound, calves easily, transmits rapid early growth, enough milk (but not too much), raises an above average calf year after year, moderate mature size, reduced feed energy needs. Cows meeting these requirements will generate more profit, because they do most everything right. **\$W average is \$47.62.**

A TOOL FOR THE COW HERD

Above average outputs (pounds of calf weaned) coupled with average or below average feed inputs are sure to improve the bottom line. But is it even possible to create a cow herd that gets so many things right? Pipe dream or achievable task? Research using the AAA database indicates that it can be done and the \$W is the right tool for the job. If your quest is to build a productive and profitable cow herd, the Association's bio-economic index called weaned calf value or \$W, can help you reach that goal.

\$W: Weaned calf value is an index value expressed in dollars per head, is the expected average difference in the future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with difference in birth weight, weaning direct growth transmitted to the calf, maternal milk and mature cow size. If you select for higher \$W animals, the results will generally be more early growth, moderate mature size, above average

(though typically not extreme) milk, and heavier calf weaning weights. Higher \$W females get these things right and constructed in a more desirable package.

USING \$W AS A SELECTION TOOL

Not every high \$W cow will be stamped out of a cookie-cutter mold, of course. \$W can and should be used as a genetic selection tool to help build increased profit potential into a cow herd. It will pay producers to pursue higher \$W cattle, while at the same time keeping a sharp eye on other individual traits, EPDs and \$Values they deem important in their operations. Doing so can help you build a cow herd that does most everything right.

\$B: Beef Value is an overall \$Value for post-weaning feedlot and carcass value. It combines \$F and \$G as a selection tool for quality, red meat yield and pounds produced. The \$B is not simply the sum of \$F and \$G. \$Values are business minded and in the language of economics. They have a great deal to offer the commercial bull buyer in terms of providing a multi-trait selection tool. It is important to remind Angus bull buyers these are one of various tools they use to make their operations successful. Selection indexes will continue to become more widely accepted across the seedstock industry as a means to identify genetics for use in commercial programs. **\$B average is \$120.17.**

\$G: Grid Value is an index value expressed in dollars per head, is expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires. **\$G average is \$34.45.**

DNA Testing—What Does It Mean?

The cattle in this sale have been DNA tested. The EPDs of the tested animals are GE-EPDs, meaning they have had a genomic test performed on a DNA sample from that animal, which provided additional information used in the calculation of their EPDs.

American Angus Association Genomic Enhanced EPDs

Genomic results are a way to enhance predictability of current selection tools, to achieve more accuracy on EPDs for younger animals, and to characterize genetics for traits where it's difficult to measure the animal's own performance for the trait, such as carcass traits in breeding stock or maternal traits in bulls. With the investment in genomic technology, this means that in addition to the pedigree, performance and progeny information that are used in the calculation and reporting of Angus EPDs, genomic test results have also been incorporated into the EPD.

Genomic-enhanced EPDs (GE-EPDs) are important because they make use of the results from the DNA test in addition to all other sources of information to provide **added ACCURACY and RELIABILITY** to the animal's EPDs. **In fact, depending on the trait, GE-EPDs on unproven animals have the same amount of accuracy as if they had already sired 8-33 calves.**

It is important to note that genomics do not completely describe the variation in the traits of interest. Actual measurements collected by Angus breeders, such as birth, weaning and yearling weights, ultrasound scan data, etc., continue to be an important part in further development of improved genomic panels, not to mention an important component in EPD calculation.

Pedigree + Performance + Progeny + Genomic Test Result = GE-EPD

How are Genomic Test Results Reported?

The results of genomic testing are provided in percentile rankings, based on a reference population of more than 504,573 tested Angus animals as of 5/31/2018. Ranks range from one to 100 with lower numbers generally favored for most traits.

When making selection decisions for traits that have EPDs provided by the AAA, then the EPDs should be the selection tool of choice. The EPD and accuracy account for all sources of information available on the animal—pedigree, own record, weights/measures and genomic results.

Progeny equivalents (PE)—Carcass trait PE equate to actual carcass harvest data, not ultrasound scan equivalents.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	28	Heifer Pregnancy	14

Yearling Height	11	Carcass Weight	9
Scrotal Circ.	13	Carcass Marbling	9
Docility	10	Carcass Rib	12
		Carcass Fat	10

Bull Development

Feeding & Development

The bulls that sell in our sale represent the product of an A.I. breeding program and extensive embryo transfer (ET) program to provide you with the most predictable cattle possible. Following a 45 day weaning period where a complete health vaccination and parasite control program is followed the bulls are moved to the Kansas Bull Development Center (KBD) where the bulls are developed.

The bulls were fed a high forage diet designed for 3.00 lbs gain/day for approximately 100 days. The KBD staff walks through the bulls daily to identify problems and condition the bulls to people. Extreme care is taken to produce a bull that will have good breeding longevity.

Yearling Measurements

Close to 365 days of age the bulls are ultrasound scanned by Casey Worrell, a CUP Certified Ultrasound Technician, from Harper, TX to quantify intramuscular fat, ribeye area, rib fat and rump fat. These evaluations are processed at the CUP Laboratory in Ames, IA then forwarded to the American Angus Association where they are used in formulating the ultrasound database which results in EPDs and progeny ratios that are used to determine the breeding value of current sires and projections for young sires. While the bull is in the chute being scanned, we also collect yearling data to include, weight, hip height and scrotal circumference. This information is entered into the Angus Herd Improvement Records and becomes permanent information for each bull.

Yearling to 18 Month Development

A few days after the yearling measurements are taken, the bulls are moved to a 150-acre Flint Hills pasture until our annual production sale. They are fed a 17% grower diet, offered free choice brome or prairie hay and allowed to graze native Flint Hills grasses. Experience has taught us pasture conditioning the bulls for approximately 6 months develops tough feet, legs and joints which increases longevity and enhances fertility.

Breeding Soundness Exam

Approximately 30-40 days prior to our annual Production Sale, Dr. Vincent Traffas evaluates the bulls for breeding soundness, semen motility and morphology and takes a scrotal measurement. Dr. Traffas provides BSE papers to buyers of individual bulls on sale day. Feel free to contact Dr. Traffas (785-282-0176) if you have any questions about the BSE of your bull(s).

First Season Breeding Guarantee

We guarantee that all breeding cattle sold by BJ Angus Genetics are fertile to the best of our knowledge. If a bull is injured anytime during the first breeding season following the sale so as to make them functionally infertile, we will provide you a satisfactory replacement, if available, or issue you a credit equal to the bulls purchase price minus the salvage value received for that bull. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply.

BJ ANGUS GENETICS HERD HEALTH

Herd health is coordinated by Dr. Vincent Traffas, Manhattan, KS (785-282-0176). Modified live viral vaccines are used exclusively and all cattle are PI tested negative for BVD. Within 30-40 days of the sale all bulls selling are evaluated for breeding soundness, scrotal measured and semen evaluated by Dr. Traffas. Breeding Soundness Exam reports will be available

sale day. Females have been calthood vaccinated. All cattle are eligible for interstate shipment and will be accompanied by proper health certificates for immediate transport. Feel free to contact Dr. Traffas if you have any questions about our herd health program.

KCF Bennett Fortress
Sire of BJ Fortress 7134

GAR Retail Product H4054
Great grandam of BJ Fortress 7134

7134 exemplifies his sire in a package that is exceptional for calving-ease, growth, marbling, muscle and \$W. Fortress is one of the most highly proven spread bulls in the Angus breed with 1000+ ultrasound records. Calves come easy, have great vigor and grow exceptionally well. Daughters in production are deep bodied, broody females with very good udder design. His dam, BJ 5050 New Design 4227, stems from the famous GAR Retail Product H4054 who has 24 females in production and 50+ ultrasound records, posts a progeny ultrasound RE ratio of 3@103 and is working for Wallstreet Cattle Company, MO. 7134 posts a WW of 824 lbs., YW of 1324 lbs., 15.7 RE (ratio 108) and ranks in the top 1% of all non-parent bulls in the breed for WW and \$W, 2% for YW, Milk, RE and 4% for \$B. Tremendous Herd Sire prospect!

BJ Angus Genetics Breeding Guarantee

We guarantee that all breeding cattle sold by BJ Angus Genetics, both bulls and females, are fertile to the best of our knowledge. If a bull is injured anytime during the first breeding season following the sale so as to make them functionally infertile, we will provide you a satisfactory replacement, if available, or issue you a credit equal to the bulls purchase price minus the salvage

value received for that bull. If a female is determined to be a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future BJ Angus Genetics Sale. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply.

- A big RE and growth bull that will add pounds to your calf crop.

SEMEN INTEREST

BJ Angus Genetics retains a one-third semen interest in every bull sold. This means the bull is totally in your control in how you want to handle him and you get 100% of the salvage value of the bull. Simply, we are reserving the right to a share of semen sales revenue from the bull if, at some time in the future, semen sales become a possibility. If you sell the bull to another breeder, BJ Angus Genetics retains the semen interest.

It is unlikely that large amounts of semen will be sold from many bulls. However, bulls are often "discovered" later in life, after proving themselves in the breeding pasture. It is for this reason we keep a semen interest in all bulls sold in our production sale.

Even bulls sold to commercial herds may become popular at a later time, as more carcass data is collected on their calves.

If you purchase a bull that we retain an interest in and you choose to collect semen from that bull as an "insurance policy" for your own use, that semen is 100% yours. BJ Angus Genetics may also wish to collect semen from the bull either for in-herd use or to build a jointly-owned semen bank for sale purposes.

If you are not interested in collecting semen on the bull, BJ Angus Genetics has the right to collect the bull, at their own expense, for their own use. The bull would be collected at your convenience.

- Top 5% for \$W, 10% for WW, 15% for Milk and Marbling, 20% for YW and 30% for \$B.
- Firestorm progeny are high performance cattle with carcass merit and overall \$B value. This is a nice square hipped and thick topped bull.
- Dam is a big volume easy keeping female.

Yearling Bull Management—Caring For Your Bulls

When you get your performance-tested bull(s) home, observing these management practices will result in the best reproductive performance.

FEEDING: Remember, the bull is a yearling or long yearling and still has some growing to do. Feed the young bull well. Hay and grain plus a protein supplement will be adequate. You should feed five to ten pounds of grain and one to two pounds of protein supplement in addition to a full feed of good quality hay from now until the start of breeding season. Continue to feed liberally so the bull will grow out well.

BREEDING SEASON: Plan to use the new bull in a restricted, 45- to 60-day breeding season the first time. Observe him closely to be sure he is serving and settling females.

NUMBER OF COWS: The yearling bull should be used on a minimal number of cows or heifers. The number should be governed by his age at the start of the breeding season. The following is a guide.

Bull's Age	Number of Females
12 to 15 mos.	10 to 12
15 to 18 mos.	12 to 18
18 to 24 mos.	18 to 25
24 mos. & over	25 to 35

MANAGEMENT & HOUSING: The bull should be kept in a well-fenced lot prior to and following breeding season. A shed or other natural wind-break should be provided. Supply plenty of clean water and minerals free-choice. Treat routinely for lice and grub worms. Run bulls together with caution. Bulls of similar age which have bred cows together will usually work. Check for any unsoundness which might develop. Test annually for Brucellosis and Leptospirosis. Vaccinate for IBR, PI3, BVD and Lepto.

GARDINER

January 15, 2019

Dear John & Bonnie,

Congratulations on your 18th upcoming production sale! Each year, as I think about writing a letter for your catalog, I'm reminded of the role those of us engaged in beef production in Kansas play in the overall

supply. If we choose to, we're fortunate to be connected to the beef industry because of our proximity to the Flint Hills, large cattle feeding companies, the largest packers and processors in America and inexpensive grain. Many seedstock producers aren't so fortunate. Seedstock producers get in our business for many reasons. Not all seedstock producers recognize the importance of breeding cattle with the genetic potential to create value throughout the supply chain.

I commend you and Bonnie for your commitment to not only knowing your customers personally, but working hard to understand what they need to be successful in their own operations. I commend you and Bonnie for the discipline to work hard to produce those cattle with value. I commend you on your 18th offering of value added seedstock.

We all know this business is full of risk, most of which are beyond our control. However, we can control our genetics, herd health, docility, customer services and the integrity to stand behind the cattle we produce.

Realizing I've made the following statement before, but I truly believe it can't be said often enough.

If you would like to purchase some of the best Angus cattle in the country, buy cattle from BJ Angus. If you would like to purchase Angus cattle that are fully guaranteed, if there is a problem John and Bonnie will take care of it, then purchase Angus cattle from BJ Angus. If you would like to purchase Angus cattle from an operation that is a student of the business of beef, then purchase Angus Cattle from BJ Angus. Finally, if you are in the beef business, and you want to add, capture and receive value from your genetic investment, then purchase Angus genetics from BJ Angus.

Respectfully,

Mark R. Gardiner

BUY BULLS ON TARGET

The Targeting the Brand logo is designed to highlight registered Angus bulls with greater genetic potential to produce calves meeting the most challenging specifications of the *Certified Angus Beef*® brand. Bulls must be at least breed average or better for marbling EPD and \$ Grid of non-parent Angus sires to qualify for use of the Targeting the Brand logo. Even when these numbers do not appear on the catalog listing, the logo gives you confidence that these minimum genetic requirements are met. Actual EPD requirements are outlined below based on the breed averages from the Spring 2019 Angus Sire Summary.

Genetic Recommendations:

	Value
Marbling EPD (Marb)	+ 0.53
Dollar Grid Carcass Index (\$G)	+ 34.09

To learn more about how commercial cattlemen can further utilize the Targeting the Brand logo in marketing genetically superior feeder cattle, visit www.AngusLink.com
